Synthesis seeks to solve a problem by building prototype solutions. Analysis is associated with the scientific method while synthesis is associated with design professions such as architecture. Synthesis relies on the talent of a designer who can immediately begin playing with solutions to a problem.

The terms analysis and synthesis has been used interchangeably in design science to explain the design process. The terms analysis and synthesis was first used in ancient times in geometry as a problem-solving method with a well established process. Synthesis is a scheme to generate a possible way the product work.

Remember the SYNTHESIS is the following section in the design process and is a list of answers. You may not be able to complete the synthesis until you have almost finished the entire project. EXAMPLE QUESTIONS FOR THE ANALYSIS: 1. Will the design be safe ? 2. What materials are available ? What materials will be the most suitable?
