Suspensions. A suspension is a mixture between two substances, one of which is finely divided and dispersed in the other. Common suspensions include sand in water, dust in air, and droplets of oil in air. Particles in a suspension are larger than those in a solution; they are visible under a microscope and can often be seen with the naked eye.

Publications Particle Surface Area and Effectiveness. In the booklet "Silver Colloids" Professor Gibbs wrote "The size of the particles in the colloidal silver suspensions we use for health purposes is very important. Particle size controls the surface area and therefore the effectiveness of the colloidal silver suspension.

### **Colloidal Silver - Particle Surface Area and Effectiveness**

As in typical colloidal systems, the size, shape and high surface area of nanocelluloses influence the properties in aqueous media, for example, the optical characteristics, stability and rheology of their suspensions.

Current Unit. Modern Atomic Theory (Chapter 11)--Ideas about the structure of matter have changed considerably over the centuries. Why, the current model of the atom is only about 100 years old! In this unit, we will become familiar with important experiments done by famous scientists, whose work helped us better understand the nature of the atom.

### **Chemistry CP - Dr. VanderVeen**

Colloidal gold is a sol or colloidal suspension of nanoparticles of gold in a fluid, usually water. The colloid is usually either an intense red colour (for spherical particles less than 100 nm) or blue/purple (for larger spherical particles or nanorods). Due to their optical, electronic, and molecular-recognition properties, gold nanoparticles are the subject of substantial research, with ...

### **Colloidal gold - Wikipedia**

Synthesis of silver nanoparticles using a leaf extract of *Polyalthia longifolia* was reported by Prasad and Elumalai (2011). An average particle size of about 58 nm was obtained. Silver and gold ions could be reduced to nanoparticles using a leaf extract of *Cinnamomum camphora* (Huang et al.,

2007).The reduction was ascribed to the phenolics, terpenoids, polysaccharides and flavones compounds ...
