### **Home - Comtrade System Integration**

System integration testing (SIT) involves the overall testing of a complete system of many subsystem components or elements. The system under test may be composed of hardware, or software, or hardware with embedded software, or hardware/software with human-in-the-loop testing.. SIT consists, initially, of the "process of assembling the constituent parts of a system in a logical, cost-effective ...

### **Prologix : The Leading System Integrator in Dubai, UAE**

Most systems do not exist in isolation, instead they must interact with other systems in some fashion. Furthermore, there is very little "greenfield" development where you build a new system from scratch, instead the vast majority of software development is more along the lines of "brownfield" efforts where you improve upon an existing system(s).
