The human nervous system is made up of two parts: Central nervous system (CNS) - brain and spinal cord: role of coordination; Peripheral nervous system - nerves: connect all parts of the body to the CNS.; Together, they coordinate and regulate body functions.

Human nervous system - Biology Notes for IGCSE 2014

The nervous system is extraordinarily complex, and it is therefore impossible to cover it in its entirety in a single laboratory. This lab will be limited to the study of the basic features of neurons and glial cells - specific organs composed of neurons, including the retina of the eye and the organ of Corti of the inner ear, will be studied in the Sensory Systems lab, in conjunction with the ...

Orchestrating Everyday Life If life is a symphony of activities—both voluntary activities, such as walking, talking, reading, or going to class, and involuntary activities, such as breathing, digesting food, pumping blood, and perspiring—then the nervous system is the orchestra that makes it all happen.

The Brain and Nervous System - humanillnesses.com

Dopamine (DA, a contraction of 3,4-dihydroxyphenethylamine) is an organic chemical of the catecholamine and phenethylamine families. It functions both as a hormone and a neurotransmitter, and plays several important roles in the brain and body. It is an amine synthesized by removing a carboxyl group from a molecule of its precursor chemical L-DOPA, which is synthesized in the brain and kidneys.
